# Table of Contents

## Preface
Combustion Noise .......................................................... V

## Scientific Papers

### Combustion Noise

- **J. Wäsle, A. Winkler, F. Weyermann, C. Hirsch, T. Sattelmayer**
  A Model for Turbulent Combustion Noise .......................................................... 391

- **C. Bender, H. Büchner**
  Combustion Noise from Non-premixed and Lean-premixed Swirl Flames .................. 402

- **M. Staufer, A. Schwarz, J. Janicka**
  On the Simulation of Premixed Flames and Coupling of Large Eddy Simulation with Computational Aeroacoustics . .......................................................... 409

- **F. Zhang, P. Habisreuther, M. Hettel, H. Bockhorn**
  Numerical Investigations of the Noise Sources Generated in a Swirl Stabilized Flame .................. 418

- **H. Shalaby, D. Thévenin, A. Laverdant**
  Potential of Direct Numerical Simulations to Investigate Flame/Acoustic Interactions .......................................................... 428

- **T. P. Bui, W. Schröder**
  Acoustic Wave Refraction in Open Turbulent Flames ........................................... 440

- **R. Piscoya, H. Brick, M. Ochmann**
  Determination of the Far Field Sound Radiation from Flames Using the Dual Reciprocity Boundary Element Method .......................................................... 448

- **F. Bake, N. Kings, A. Fischer, I. Roehle**
  Indirect Combustion Noise: Investigations of Noise Generated by the Acceleration of Flow Inhomogeneities .......................................................... 461

- **B. Mühlbauer, B. Noll, M. Aigner**
  Numerical Investigation of the Fundamental Mechanism for Entropy Noise Generation in Aero-Engines .......................................................... 470

- **C. Richter, D. Morgenweck, F. Thiele**
  CAA Simulation and Intensity Based Evaluation of a Model Experiment for Indirect Combustion Noise .......................................................... 479

## General Linear Acoustics

- **Y. A. Kobelev, A. V. Lebedev**
  How Critical the Choice of the 3D Acoustic Cloaking Shell Parameters Is .......................................................... 493

- **O. Lenoir, L. Guénéguo**
  The Phase Gradient Method: Application to the Obtaining of the Dispersion Curves and the Energy Velocity of Anisotropic Plate Modes .......................................................... 501

## Flow Acoustics

- **M. Glessner, V. Valeau, A. Billon, A. Sakout**
  Experimental Investigation of the Aeroacoustic Coupling Between the Non-Planar Modes of a Resonator and the Misaligned Jet-Slot Oscillator .......................................................... 512
Room Acoustics
S. Sato, N. Prodi
On the Subjective Evaluation of the Perceived Balance Between a Singer and a Piano Inside Different Theatres

Computational and Numerical Acoustics
O. Dazel, B. Brouard, N. Dauchez, A. Geslain
Enhanced Biot’s Finite Element Displacement Formulation for Porous Materials and Original Resolution Methods Based on Normal Modes

Musical Acoustics
A. Nykänen, Ö. Johansson, J. Lundberg, J. Berg
Modelling Perceptual Dimensions of Saxophone Sounds

Technical and Applied Papers
M. Arana, R. San Martín, I. Nagore, D. Pérez
Using Noise Mapping to Evaluate the Percentage of People Affected by Noise

J. Poblet-Puig, A. Rodríguez-Ferran, C. Guigou-Carter, M. Villot
The Role of Studs in the Sound Transmission of Double Walls

Short Communications
U. P. Svensson, P. T. Calamia, S. Nakanishi
Frequency-Domain Edge Diffraction for Finite and Infinite Edges

P. Brooker
Measuring Community Annoyance from Aircraft Noise
